Before you give an agent a job

One task. Clear boundaries. Named accountability.

Task / workflow: _____

Human owner: _____ Date / version: _____

01 Purpose

What problem should this solve, for whom, and why does it matter?

02 Inputs

What context, data and tools are needed? Which version is authoritative?

03 Permissions

What may it read, change or send? What is forbidden? Set time / cost limits.

04 Evidence requirements

Which sources are acceptable? How should claims and uncertainty be recorded?

05 Approval points

What requires approval? Who approves? When must it stop or escalate?

06 Definition of done

What output and quality checks prove completion? Who accepts the result?

Before the first live run

- ☐ Test on a safe example
- ☐ Confirm access limits
- ☐ Keep a manual fallback

Permission to investigate is not permission to publish.
